- Report daily work to Coach, Scrum Master.
- Build function to export all customer information into Excel file
- Excel template format for users to enter the correct fields such as gender, province, district, ward, commune...
- Build function to import customer list from existing Excel file.

About the project

Sapo is a Multi-Channel Sales and Management Platform accepted by the community, so we chose Sapo to learn the business and do it again. During the research, our team realized that there are still many stores that use manual methods of bookkeeping while only a few steps can create and store customer information. And keep it for a long time instead of having to keep complicated books. Thanks to the smart search engine and multi-state filter, shop owners can analyze and form a list of loyal customers to devise reasonable customer care strategies, so our team has researched and Develop customer management section.
